Dear Peter,

I hope this email finds you well and that you have had a productive trip to the Netherlands.

I for one thoroughly enjoyed the seminar on AI & ethics and the attention economy. Literally sitting between you and David McMahan really inspired me ...

- problem ≠ predicament
  - ↳ conflicts within and among prevailing values
- centrality of interdependence
  - ↳ to me, surrogate is tied to prevailing conditions

- Why meditate: we will not succeed in becoming present as needed to engage in sustained and predicament resolution

- Trisiksa: moral clarity
  attentive mastery
  wisdom
) necessary to realize enlightening relational dynamics

attentive mastery is pivotal.

- My tensions with kaayaa: whilst I appreciate the teaching (and in that sense am devoted to the lineage), I find it increasingly more difficult to adopt the practices put forward as I progress in the vajrayana path.

- What is the need for Gurus Yoga, for example, if we can just simply rest.

Also, emphasis on "enlightment in this lifetime" for me is beside the point. I can more conceived as just leading a good life, in the time that is given me in this lifetime. The quest on reincarnation is something that I have parked.

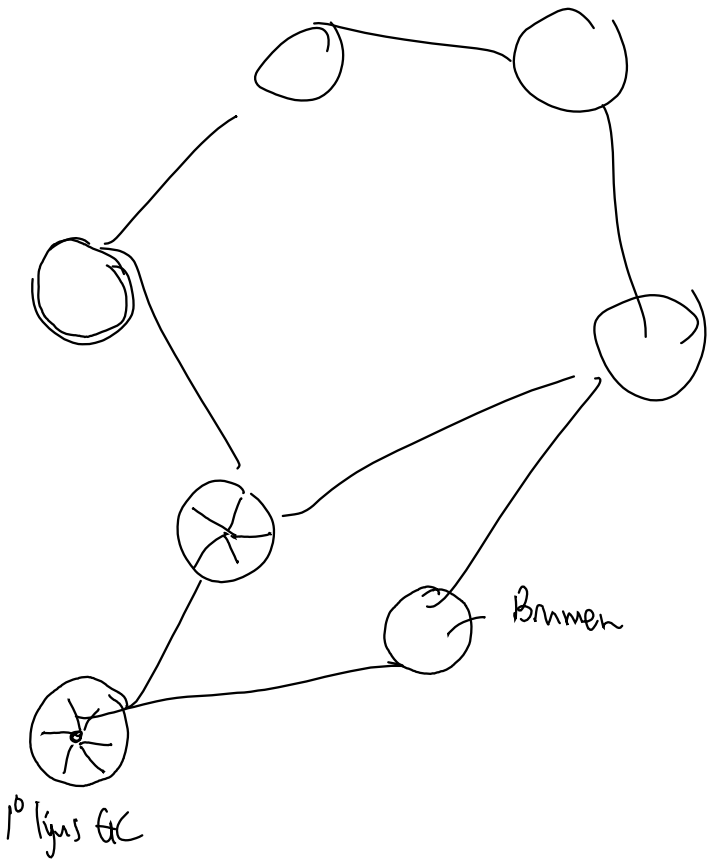

- Various other:

Confucian personhood - autonomy of self (McMahon)

Socratic personhood - critical resolve

- Philips
- family physicians, 3rd year
- focus on primary care
- Idea: telecommute to compl. rapid testing
- workout with startups
- "let's remain telework as long as possible"

CBL paper

- we present a practice paper based on professional education program that has been running since 2018
- ~~we~~ for the this paper, we present a narrative about how we evolved.. an pedagogical ~~to focus~~ where we pivoted to fit PBL ~~in~~ in 2020 Covid-19 context: corona!
- Based on this we reflect on a number of challenges specific to PE:
  - time constraints
  - wide background knowledge

  specific to data science x AI:
  - misconceptions
  - accomodate different learning goals

Is this about me or is this about the path.

Story focus on benefit others.

→ "put me in service of others"

Modern:

2024-11-21 : Speech Alumin Event

Alright, so it is my pleasure as the last speaker of today to wrap up the formal part of this event. Let me start by introducing myself, especially to those of you who have tagged along with me as an alumni.
My name is David, and I have been indeed with JMDS & EMS1 Academy since 2019. At that time, I had been working in the area of data science + AI for twenty years and thought "wouldn't it be nice if I could combine my daily work with teaching the next generation professionals"

So I am not exaggerating if I say that when I got a phone call from Egge Vid. Prod, one of the people who was involved in the start, — when he called and asked whether I would like to join the team, it really felt like a huge gift that was given to me.

And here we are 5 years down the line and it really pleases me to see so many familiar faces.

And I want to emphasize just how special and valuable it is to have peers and "fellow nerds" — like myself, within your network

to turn to when you have questions, want to bounce of your ideas or get help when you have spend way too much time trying to fix a bug in your code.

As an advisor, I have so many Mbo-critical data science and AI teams at organisations, as they say in Dutch "anderhalve man en een paardekop" (which apparently translates to "two men and a dog"; I had to look that up) which obviously doesn't quite cut it if you really want to make a difference with as a "data scientist

And that more or less the big message of my talk: in a moment, I will do the honours of officially launching our on brand new Alumni platform.

But before I do that, I want to take the opportunity to use this podium to raise an important and topical issue related to our work. To give it a name, this issue is the Paradox of Open (click)

So what is the paradox? To quote one of the many papers on the open fist. Faddoul, a full time in Amsterdam, the paradox relates to

"... read slides..."

This paradox is not new: ever since the rise of the open movement in the late 1990s, we as a society are continuously trying to find a fair and sustainable balance between the commons, that is stuff that belongs to us all but to no one in particular, and private property

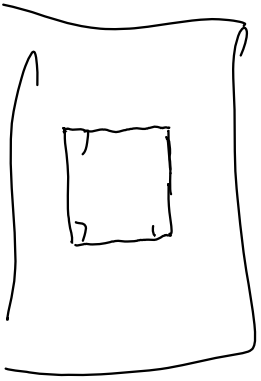

Without the success stories of the Linux operating system, the TCP/IP protocol of the Internet, Wikipedia and the whole arsenal of open source software and tech. code our field of work would not be where it is now.

But open source is not without problems and issues. Paradoxically, operations that have the deepest pockets and largest infrastructures stand to gain most by open source. None of the foundational LLMs could have been developed if not for the high quality data that Wikipedia provides

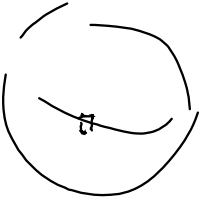

And here lies the paradox;
while, for example, publishers + news agencies are challenging Big Tech through copyrights, by definition Wikimedia can't and won't do that, because that would be against the fundamental principles of the Creative Commons license.
So if we can't force commercial users to pay for the AI data that is available in the commons, can we think of other ways to make it more "fair".
This is exactly one of the key principles of data solidarity: Prof Barbara Prainsack from University of Vienna has proposed

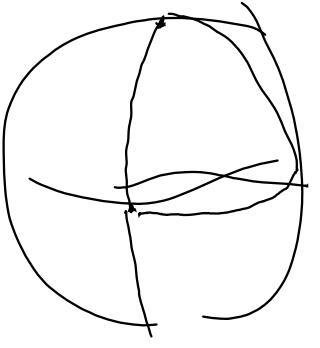

an interaction, and some would say radical, idea, namely that if you use data from the commons and you make (derive) a closed source product for it, you should give back. In this case to the multiproduct Foundation who are known to be structurally underfunded.

So is it all about money? Yes and no
